

The HO scale Siemens S70 model!

The San Diego Metropolitan Transit System (SDMTS) S70 preproduction model that you see pictured above right was produced through the efforts of Volkmar Meier of Paris, France, Bowser Manufacturing of Mountoursville, PA and Custom Traxx of Los Angeles. The bodies and chassis of all these cars were all produced using 3D printing. They were painted by Volkmar Meier, lettered by Custom Traxx and the Halling or Bowser propulsions systems were installed either by Volkmar Meier or Custom Traxx.

If sufficient interest can be demonstrated, these models could be made available to modelers using injection molding with DCC / Sound and one or two Bowser power trucks. They would be marketed under the Bowser name. We anticipate the cost to range from \$60.00 for an unpowered (souvenir) unit, \$185.00 for a DC powered unit and \$285.00 for a model with DCC/Sound. Souvenir units are mainly sold to the transit agency gift shops and to modelers who desire to fill up their model storage yards.

Again, the issue here is "sufficient interest". Any questions that you have on these models can and will be answered. If you have any interest in the development of these models, please take a moment and provide your contact data so we can keep you informed as to the progress on getting these models produced.

Thank you for your interest in urban electric railway modeling,

George L. Huckaby
